

TD(H)341SCAN DFN package isolated CAN transceiver

Features

- Ultra-small, ultra-thin, chip scale DFN package
- Compliant with ISO11898-2 standard
- Integrate 3.3V efficiently power supply
- I/O power supply range supports 3.3V and 5V microprocessors
- High isolation to 5000VDC (TD341SCAN 3000VDC)
- Bus-Pin ESD protection up to 15kV(HBM)
- Baud rate up to 1Mbps
- -40V to +40V bus fault protection
- >25kV/us CMTI
- Low communication delay
- The bus supports maximum 110 nodes
- Industrial operating ambient temperature range: -40℃ to +105℃
- Meet AEC-Q100 standards
- EN62368 approval
- Moisture Sensitivity Level (MSL) 3

Applications

- Industrial automation, control, sensors and drive systems
- Building and greenhouse environmental control(HVAC) automation
- Security system
- Transport
- Medical treatment
- Telecommunication
- CAN Bus standard such as CAN open, Device Net, NMEA2000, ARNIC825, ISO11783, CAN Kingdom, CAN aerospace

Functional Description

TD(H)341SCAN is a isolated CAN Bus transceiver, which is compliant with ISO11898-2 standard. Their logic side supports 3.3V and 5V logic level conversion. TD(H)341SCAN integrate 3.3 V efficiently power. The TD(H)341SCAN provide differential transmitting and receiving capability between the CANH protocol controller and the physical layer bus. It is capable of running at data rates of up to 1 Mbps. The device has the function of series line, over-voltage(-40V to 40V), ground loss protection and thermal shutdown so that it is especially suitable for working in harsh environment.

V _{ID} ≤0.5V	H	Recessive
Open	H	Recessive

Pin Descriptions

Pin Number	Pin Name	Pin Functions
1	GND ₁	Ground(Logic side)
2	S	Ground Pin. In normal applied, this pin should connect to ground1.
3	GND ₁	Ground(Logic side)
4	RXD	Receiver output pin.
5	TXD	Driver input pin.
6	V _{IO}	Isolation power supply pin. By using 0.1uF ceramic capacitance ground1.
7	GND ₁	Ground(Logic side)
8	V _{CC}	Power supply pin. By using 1uF ceramic capacitance ground1.
9	GND ₁	Ground(Logic side)
10	GND ₁	Ground(Logic side)
11	GND ₂	Ground (Bus side)
12	V _{ISOOUT}	Insulation power output. By using 1uF ceramic capacitance ground2. The pin needs to be connected to pin19 in application.
13	GND ₂	Ground (Bus Side)
14	NC	No connect
15	CANL	Low level CAN voltage input/output
16	GND ₂	Ground (Bus side)
17	CANH	High level CAN voltage input/output
18	NC	No connect
19	V _{ISOIN}	Insulation power input. By using 0.1F ceramic capacitance ground2. The pin needs to be connected to pin12 in application.
20	GND ₂	Ground (Bus side)

Absolute Maximum Ratings

General test conditions: Free-air, normal operating temperature range (unless otherwise specified).

PARAMETERS	UNIT
Supply voltage,V _{CC}	-0.3V to +3.5V
Digital input voltage (TXD, RXD)	-0.3V to +5.5V
Bus voltage (CANH, CANL)	-40 to 40V
Receiver output current	-15 to 15mA
Operating temperature range	-40°C to +105°C
Storage temperature range	-50°C to +130°C
Reflow soldering temperature	Peak temp. ≤250°C, maximum duration ≤60s at 217°C. Please also refer to IPC/JEDEC J-STD-020D. 3.

Important: Exposure to absolute maximum rated conditions for an extended period may severely affect the device reliability, and stress levels exceeding the "Absolute Maximum Ratings" may result in permanent damage.

Recommended Operating Conditions

PARAMETERS		Min.	Nom.	Max.	Unit
V _{CC}	Power supply	3.15	3.3	3.45	V
V _{IO}	Power supply(Logic Side)	2.375		5.5	V
V _I or V _{IC}	Voltage at any bus terminal (differential mode)	-12		12	V
V _{IH}	High-level input voltage(TXD)	2			V
V _{IL}	Low-level input voltage(TXD)			0.8	V
I _{OH}	High-level output current	Driver	-70		mA
		Receiver V _{CC} =3.3V	-4		
I _{OL}	Low-level output current	Driver		70	mA
		Receiver V _{CC} =3.3V		4	
T _A	Operating temperature range	-40		105	°C
I _{CC}	Recessive mode current		20	35	mA

I _{CC}	Working current	V _{CC} = 3.3V, R _L = 60Ω ; TXD signal : f=500kHz ; Duty=50%		50	65	mA
	Signaling rate		0		1000	kbps

Electrical Characteristics

General test conditions and V_{CC}=V_{IO}= 3.3V, Ta = 25°C (unless otherwise specified).

Detailed Description

TD(H)341SCAN is a CAN of a style of separation transceiver with the ability of differential signal transmission between the bus and CAN protocol controller, it the inner integration insulate DC/DC power supply. which is compliant with ISO11898-2 standard.

Short-circuit protection: TD(H)341SCAN has current-limiting protection to prevent the drive circuit from short-circuiting to positive and negative supply voltages. The power dissipation increases when a short circuit occurs. The short-circuit protection function protects the driver stage from damage.

Over-temperature protection: TD(H)341SCAN has over-temperature protection. When the junction temperature exceeds 160°C, the current in the driver stage will decrease. Because the drive tube is the primary energy consuming component, current reduction can reduce power consumption and reduce chip temperature. At the same time, the rest of the chip remains functional.

Figure 13. The typical model applies telephone

Figure 14. Type PCB layout

In General, Vcc and Vlo can be shorted(Figure 14) .If the controller doesn't support 3.3V signal input, it can power 5V for Vlo. When the module is working normally, please connect the S pin to ground1.

Figure 15. Port protection circuit for harsh environments

Recommended components and values:

Component	Recommended part, value	Component	Recommended part, value
R3	1MΩ	D1、 D2	1N4007
C1	1nF, 2kV	D3	SMBJ30CA
T1	ACM2520-301-2P	Rterminal	120Ω
GDT	B3D090L	R1、 R2	2.7Ω/2W

When the module is used in applications with harsh environment, it can be susceptible to large energy like lightning strike, etc. in which case, it is essential to add an adequate protection circuit to the CAN signal ports to protect the system from failure and maintain a reliable bus communication. Figure 15 provides a recommended protection circuit design for high-energy lightning surges, with a degree of protection related to the selected protection device. Parameter description lists a set of recommended circuit parameters, which can be adjusted according to the actual application situation. Also, when using the shielded cable, the reliable single-point grounding of the shield must be achieved.

Note: The recommended components and values is a general guideline only and must be verified for the actual user's application. We recommended using PTC's for R1 and R2 and to use fast recovery diodes for D1 and D2.

- ① Power isolation V_{ISOOUT} need through a series of capacitors connected to the output pin V_{ISOIN} , the power supply is not recommended for other purposes, otherwise it may cause the bus voltage did not meet the requirements of communication, causes the communication failure.
- ② Hot-swap is not supported.
- ③ If the external input of TXD is insufficient, the pull-up resistor should be added according to the situation.
- ④ Refer to *IPC 7093* for the welding process design of this product. For detailed operation guidance, please refer to *Hot Air Gun Welding Operation Instruction for DFN Package Product* or *Welding Operation Instruction for DFN Package Product*.
